

## RECOMMENDED CARE AND CLEANING OF ALL PADDING

Whether you are using DIGITALLY PRINTED vinyl pads and mats, SILK SCREENED pads and mats, or pads and mats with NO GRAPHICS, it is important to keep them clean. Frequent cleaning is required to remove dust, dirt, and perspiration, and will keep your pads looking fresh. The regular cleaning and disinfecting of vinyl covered pads and mats, such as tumbling mats and wall padding is a critical deterrent to the spread of skin infections. Vinyl pads and mats will provide years of service with proper care, and under normal conditions.

### **CLEANING**

***Cleaning vinyl involves using a proven reliable cleaning product, or mild, high-suds soap and water.***

- Do not use any products that contain acetone, 2-Butoxyethanol, or chlorine. These chemicals will remove applied inks, and inks used in the silk-screening processes.
- Do not use scouring cleaning tools or abrasive products that contain pumice or gritty components. These products will damage the surface.
- Some chemical cleaning products may not mix well with others, and combining chemicals, even if over a period of time, could result in damage to the pads.
- Some chemicals react to exposure to sunlight, heat, or cold once applied, even after the surface has been rinsed.
- Thoroughly rinse the coated vinyl to remove any trace of cleaning material, including soap. Avoid moisture build up.
- Never use pressure washers on coated vinyl, this can damage the surface.
- Using unapproved cleaning methods on these products will void the product warranty, which is 1 year.

***DO NOT USE!***  
***SIMPLE GREEN, 409 CLEANER, CLOROX CLEANER***
